Healthy Food Chart & Meal Plan for 2-5 year old Kids

Creating a healthy diet plan for kids is crucial, especially in the years of their growth. With the amount and variety of food out there, ensuring that your kids eat healthy can be quite a task. A healthy diet plan for kids sets the base for substantial growth. Looking out for your kid, you always want the best for them, and [ensuring mental & physical development in the early childhood \(2-5 years\)](#) phase is important. Hence, a healthy diet chart for 2-5 year old kids helps in supporting their growth & development. While creating a healthy diet chart for 2-5 year old Indian kids, some things are absolutely necessary to be remembered when trying to feed the kids

- a) Foods rich in protein and energy are important at this stage like - milk, eggs, peanut butter
- b) Creating a relaxed atmosphere during meals encourages eating
- c) Kids palates aren't highly developed, hence avoid serving highly flavoured and spicy foods
- d) Ensure that your kid eats the right amount from each food group for [complete nutrition](#)
- e) Small portions served at frequent intervals helps

**Honey plays a crucial role in taste development, particularly in early life, as it introduces infants to a diverse range of flavors and helps shape their palate. However, honey can contain the bacteria that may cause infant botulism. Consequently, honey should not be introduced before 12 months of age unless the spores of Clostridium botulinum have been inactivated by adequate high-pressure and high-temperature treatment, as used by industry.*

Whenever honey is used in our products, it undergoes an externally validated treatment that ensures our products are safe to consume.
